

ABOUT

d64tool is a multipurpose tool for d64 files from command line. With this tool you can:

- Show the directory with different options like CRC checksum and real block count
- Export the directory to a .csv file
- Export tracks and sectors for use in assembler code
- Remove files from the directory
- Delete files
- Show the BAM
- Show disk blocks
- New in V1.1
 - Unlink data from directory entry
 - Crop file names
 - Move filenames to right

V1.1 added (experimental) support for Ubuntu/Linux.

V1.2 added BAM message support.

USAGE

```
d64tool.exe      [-v[a|t|s|f|n|b|c|p]]      <d64 file> [<dest file>]
                  [-csv]
                  [-rd|-ud|-sd num [last]]
                  [-cf|-mf n num [last]]
                  [-start num addr]
                  [-adel]
                  [-block [track [sector]]]
                  [-bam]
```

DESCRIPTION

```
<d64 file> ... D64 file to be shown
-v ..... Alter view of directory entry as follows
 a ..... Show all files (even deleted ones)
 t ..... Show track and sector
 s ..... Show start address
 f ..... Show file size
 n ..... Show number for file
 b ..... Show real block count
 c ..... Show CRC check sum
 p ..... Use alternative presentation (optional)
-csv ..... Display directory as .csv
-e ..... Export track and sector as assembler bytes
          (Do not combine with other options)
-sd ..... Scratch directory entry (entry becomes *DEL)
-ud ..... Unlink data from directory entry (leaves BAM and data)
          (e.g. change PRG file to empty DEL file with 0 blocks)
-rd ..... Remove directory entry (leaves BAM and data)
 num ..... First or only entry to be scratched/unlinked/removed
 last ..... Last entry to be scratched/unlinked/removed (optional)
```

```

-cf ..... Crop file name(s) after n chars (num [last] as above)
-mf ..... Move file name(s) n chars to right (num [last] as above)
-start ..... Change start address of one directory entry
  num ..... Number of file which address has to changed
  addr ..... New start address
-adel ..... Append empty DEL entry
-block ..... Show the given block (default is 18 0) (Windows only)
-bam ..... Show BAM
-bm ..... Show BAM message
-bmx ..... Show BAM message with new lines ever 16 chars
-bmr ..... Replace BAM message
-bmc ..... Clear BAM message
-name ..... show disk name only
-id ..... show id only
-newname ..... change disk name
-newid ..... change id

```

Always provide the full file name including extension .d64

EXAMPELS

```
d64tool.exe example.d64
```

Show directory of the virtual disk.

```
d64tool.exe -vats example.d64
```

Show directory of all files (even deleted ones) including track and sector.

```
d64tool.exe -e example.d64
```

```

C:\WINDOWS\system32\cmd.exe
tracks:
  .byte 19,17,18,18,18,18,18,18,18,18,18,18,18,18,13,23,23,12,24,11,25,10, 9,27, 8,28, 6,30,30
